Applications

Table of contents

1. XLattice Applications

These are software packages based on XLattice components. An XLattice application is delivered with all necessary jars except for the Java runtime package itself.

1.1. About To Be Released

XLattice currently has two applications in development.
- **CryptoServer,** a lightweight, secure, and very fast Web server
- **ShareDev,** a set of tools using peer-to-peer technologies to support cooperative software development

An early release of the CryptoServer is expected in January of 2005. Components are available in CVS. For moderately reliable information on progress in CryptoServer development, see its [roadmap.](#)
